

## Acknowledgements

As partly touched upon in the preface, we are deeply indebted to many organizations and individuals for holding the symposium and bringing about this volume. Scientific Committee on Antarctic Research sponsored the meeting on advice by its Working Groups both on Geology and on Solid Earth Geophysics, assisting young scientists to attend the meeting. International Steering Committee took the trouble to revise the programs, and reviewed the abstracts and the papers together with many other colleagues. We list here the names of reviewers to express our hearty gratitude. National Institute of Polar Research, through Local Organizing Committee and with its administrators behind, made every effort to manage the symposium as the official host.

The Ministry of Education, Science and Culture (Monbusho), Japan Polar Research Association, and Tokyo

Geographical Society provided generous grants-in-aid in support of the symposium and as travel expenses for some key speakers. Many companies, those under the Federation of Economic Organization (Keizai Dantai Rengokai) and others not in this framework, presented generously the donation as the fund for promotion of Antarctic earth sciences. Personal contribution from a non-scientist was also made. The publication of this volume was supported greatly by this fund. We apologize deeply to them, however, that we cannot list here the names of these bona fide contributors.

Finally, we thank Mr. K. Oshida, representative of TERRAPUB, for his experienced and self-sacrificing efforts to bring about this book.

K. Kaminuma and Y. Yoshida
