Preface, v

## Chapter 1 INTRODUCTION

- 1.1 The Nature of Shock Waves, 3
- 1.2 Compaction of Powders and Shock Activation, 6
- 1.3 First-Order Phase Transitions and Chemical Reactions, 10
- 1.4 Time Scales and Interactions of Basic Mechanisms, 12
  - 1.4.1 Shock propagation in a particle assemblage, 12
  - 1.4.2 Energy localization, 12
  - 1.4.3 Thermal relaxation of hot spots, 14
  - 1.4.4 Mass diffusion in solids, 14
  - 1.4.5 Kinetic constants, 14
- 1.5 Some Roles of Shock Compression Techniques in Material Sciences Study, 16
  - 1.5.1 Shock compression technique as a tool of high pressure production, 16
  - 1.5.2 Appearance of diamond anvil-type high-pressure apparatus, 16
  - 1.5.3 New roles of shock compression technology as a unique method of very high temperature production, 18
  - 1.5.4 Development of conventional hypervelocity impact techniques for precise measurement of materials under shock compression, 19

## Chapter 2 FUNDAMENTALS OF SHOCK WAVE PROPAGATION

- 2.1 Hydrodynamic Jump Conditions and the Hugoniot Curve, 23
- 2.2 Shock Transition in Hydrodynamic Solids, 32
- 2.3 Non-Hydrostatic Deformation of Solids, 42
  - 2.3.1 Elastic-ideally-plastic solids, 42
  - 2.3.2 Experimental observations of elastic-plastic behavior, 53
- 2.4 Wave-body interactions, 56

- 2.4.1 Preliminaries, 57
- 2.4.2 Planar impact of similar and dissimilar bodies, 60
- 2.4.3 Shock wave interaction with material boundaries, 61
- 2.4.4 Wave-wave interactions, 65
- 2.4.5 Detonation wave and interaction with a solid surface, 66

### Chapter 3

#### SHOCK COMPRESSION TECHNOLOGY

- 3.1 Gun Techniques, 80
  - 3.1.1 Single stage gun, 80
  - 3.1.2 Conventional two stage light gas gun, 80
  - 3.1.3 Velocity measurement of projectile, 83
  - 3.1.4 Magnetoflyer method, 83
  - 3.1.5 CW x-ray velocity meter, 84
  - 3.1.6 Measurement of interior projectile motion, 86
  - 3.1.7 Recovery experiments, 87
- 3.2 Explosive Techniques, 89
  - 3.2.1 Plane shock wave generation and recovery fixture, 89
  - 3.2.2 Numerical simulation of shock compression in the recovery capsule, 91
  - 3.2.3 Cylindrical recovery fixture, 94
- 3.3 In-situ Measurements, 95
  - 3.3.1 Manganin pressure gauge, 95
  - 3.3.2 Particle velocity gauge, 99
  - 3.3.3 Observations of multiple shock reverberations by using a manganin pressure gauge and particle velocity gauge, 100
  - 3.3.4 Shock temperature measurement, 106
  - 3.3.5 Copper-Constantan thermocouple as a temperature and pressure gauge, 111

### Chapter 4

#### THERMOMECHANICS OF POWDER COMPACTION AND MASS MIXING

- 4.1 A One Dimensional Particulate Model, 117
- 4.2 Continuum Models, 123
  - 4.2.1 Hydrodynamic models, 124
  - 4.2.2 Continuum plasticity theory, 141
  - 4.2.3 Application, 148
- 4.3 Particle Bonding and Heterogeneous Processes, 154
- 4.4 Mass Mixing, 160

## Chapter 5

## THERMOCHEMISTRY OF HETEROGENEOUS MIXTURES

- 5.1 Thermodynamic Functions of Heterogeneous Mixtures, 172
- 5.2 Analytical Equations of State, 187
- 5.3 Hugoniot of Inert Mixtures, 191
  - 5.3.1 Thermodynamically equilibrium models, 191
  - 5.3.2 Mechanical models, 197
- 5.4 First-Order Phase Transitions, 199
- 5.5 Chemical Equilibria, 206
- 5.6 Reaction Kinetics, 212
  - 5.6.1 Rate equations, 212
  - 5.6.2 Nucleation, 214
  - 5.6.3 Growth, 216
  - 5.6.4 Pressure effects, 217
- 5.7 Shock-Induced Reactions in Powder Mixtures, 218

## Chapter 6

## HYDRODYNAMICAL CALCULATIONS

- 6.1 Conservation Equations of Continuum Flow, 227
  - 6.1.1 Mass conservation, 228
  - 6.1.2 Conservation of linear momentum, 230
  - 6.1.3 Energy conservation, 231
- 6.2 Constitutive Modeling of Inorganic Shock Chemistry, 234
  - 6.2.1 VIR model, 235
  - 6.2.2 Pore collapse, 239
  - 6.2.3 Chemical kinetics, 239
  - 6.2.4 Computational constitutive reactions, 240
- 6.3 Applications of the VIR Model, 245
  - 6.3.1 Shock wave profiles in Ni/Al powder mixtures, 245
  - 6.3.2 Compaction of diamond with Si and graphite, 250
- 6.4 Continuum Mixture Theory and the VIR Model, 257
  - 6.4.1 Continuum mixture theory, 257
  - 6.4.2 Derivation of the VIR model using the CMT, 263
  - 6.4.3 A model of heterogeneous flow, 269

## Chapter 7

## SHOCK CONDITIONING AND PROCESSING OF CERAMICS

- 7.1 Shock Conditioning of Powder of Inorganic Materials, 277
  - 7.1.1 Brief review of shock conditioning studies, 277
  - 7.1.2 Aluminum oxide powder, 277

- 7.2 Shock Synthesis of Inorganic Materials, 281
    - 7.2.1 Shock synthesis studies, 281
    - 7.2.2 High dense forms of carbon, 281
    - 7.2.3 High dense forms of boron nitride, 285
    - 7.2.4 Shock treatment of boron nitride powders, 287
  - 7.3 Shock Consolidation of Ceramic Powders, 301
    - 7.3.1 Why non-oxide ceramics?, 301
    - 7.3.2 Dynamic consolidation of SiC powders, 302
    - 7.3.3 Approach to the fabrication of crack free compacts, 304
    - 7.3.4 Shock consolidation of SiC powder utilizing post shock heating by exothermic reaction, 305
  - 7.4 Dynamic Compaction of Zinc Blende Type Boron Nitride and Diamond Powders, 310
    - 7.4.1 Back ground, 310
    - 7.4.2 Cubic boron nitride, 311
    - 7.4.3 Diamond, 318
    - 7.4.4 Diamond composites obtained by utilizing exothermic chemical reaction, 326
  - 7.5 Very High Pressure Sintering of Shock Treated Powders, 332
    - 7.5.1 Silicon nitride, 334
    - 7.5.2 w-BN, 336
  - 7.6 Rapid Condensation of High Temperature Ultrasupersaturated Gas, 347
    - 7.6.1 Silicon nitride, 347
    - 7.6.2 Carbon, 352
- Index, 361
