## Part I

### THE NATURE OF TROPOCHEMICAL CELL-TWINNING

*Progress of study of known examples of homologous series based on the TCT mechanism*

#### Chapter 1

INTRODUCTION, 1

Reference, 8

#### Chapter 2

HETEROVALENT VACANCY-COUPLED SUBSTITUTION, 11

Reference, 13

#### Chapter 3

HOMOLOGOUS SERIES IN THE PbS - Bi<sub>2</sub>S<sub>3</sub> SYSTEM AND EXTENDED LILLIANITE HOMOLOGOUS SERIES, 15

Introduction, 15

Twinning in galena, 15

Notation of cell-twin units, 17

The lillianite homologous series,  $x\text{PbS}\cdot\text{Bi}_2\text{S}_3$ , 20

Derivation from the PbS structure, 20

Cation distribution, 22

Stable phases in the Pb-rich side, 26

Mechanism of transformation to the galena structure, 27

Phase-V homologous series,  $\text{Pb}_{1-x}\text{Bi}_{2x/3}\text{S}\cdot 2\text{Bi}_2\text{S}_3$ , 32

The crystal structure of V1,  $\text{Pb}_{0.73}\text{Bi}_{4.18}\text{S}_7$ , 35

Structural features of the phase V series, 38

TCT mechanism underlying the phase-V series

Variation of chemistry according to the change of cell-twin periodicity, 39

Extended lillianite homologous series, 41

The structures of vikingite,  $\text{Pb}_8\text{Ag}_5\text{Bi}_{13}\text{S}_{30}$ , and gustavite  $\text{AgPbBi}_3\text{S}_6$ , 45

TCT mechanism, 47

Note on the pavonite homologous series, 47

Phases in the PbS - Bi<sub>2</sub>S<sub>3</sub> system other than the lillianite homologues, 49

Reference, 55

Chapter 4

HOMOLOGOUS SERIES IN THE  $MnS - Y_2S_3$  SYSTEM, 59

Homologous series,  $xMnS \cdot Y_2S_3$ , with  $x = 0 \sim 0.5$ , 59

Reference, 62

Chapter 5

THE ENSTATITE-IV HOMOLOGOUS SERIES,  $Me_{\sim x/3}Mg_{\sim 2/3}Si_{(x-4)/3}O_x$  or  $Me_{\sim x/3}Li_{\sim 4/3}Si_{(x-4)/3}O_x$ , WITH  $Me = Mg, Sc$  and  $x = 88, 100, 112$  or  $124$ , 63

Introduction, 63

Pyroxenoid homologous series, 64

Configuration of octahedral bands, 66

Effect of cation size on the configuration of silicate chains, 70

Phase relations in the systems,  $MgSiO_3 - LiScSi_2O_6$  and  $MgSiO_3 - Sc_2O_3$ , 75

Structural scheme of the EnIV-N series, 77

Supercell - subcell relation, 77

Derivation of structure series from a clinopyroxene, 78

Contents of the unit cell, 83

Nomenclature, 84

Characteristics of the CPX slabs, 85

Silicate chains, 85

Octahedral bands, 88

Boundary layers, 93

Structural relationship - details of the TCT mechanism, 96

Higher-order superstructures, 98

Compound superstructure, 98

Symbolism of the basic superstructures, 99

Derivation and symbolism of the compound superstructures, 99

Space group of the compound superstructures, 102

Observed compound superstructures, 102

Reference, 110

Chapter 6

HOMOLOGOUS SERIES OF OXYBORATES RELATED TO PINAKIOLITE,

$(Mg, Mn^{2+}, Fe^{3+})_{1.9}Mn^{3+}O_2[BO_3]$ , 113

Introduction, 113

Chemical composition and crystal data, 115

Basic structures, 117

The structure of pinakiolite, 117

Ordering of cations in pinakiolite, 120

A new aspect of the cation ordering in pinakiolite, 121

The structure of ludwigite, 121

Continuity of the ludwigite - vonsenite solid solution, 124

Structures of synthetic phases of the ludwigite type, 125

Plane defects in pinakiolite, 125

Mechanism of formation, 125

- Repetition of plane defects, 132
- Tropochemical cell-twinning in the pinakiolite homologous series, 133
  - Types of cell-twinning and their designation, 133
  - Geometrical characteristics of the cell-twinned structures, 136
  - Structural details of the pinakiolite homologues, 137
  - The number of  $\text{Mn}^{3+}$  per cell as a function of  $n$  (width of the cell-twin units), 149
  - Remarks on the hypothetical phases, 150
- Antimony-rich varieties of the pinakiolite family, 150
  - Dependence of chemistry on cell-twinning, 153
- Reference, 157

## Part II

### NEW EXAMPLES OF HOMOLOGOUS SERIES

*Based on the TCT mechanism*

#### Chapter 7

THE PLAGIONITE HOMOLOGOUS SERIES,  $\text{Pb}_{3+2x}\text{Sb}_8\text{S}_{15+2x}$ , with  $x = 0, 1, 2, \text{ or } 3$ , 161

- Introduction, 161
  - The structure of plagionite  $\text{Pb}_5\text{Sb}_8\text{S}_{17}$ , 164
  - Structural relationship - previous study, 164
- The relationship between the unit cell of plagionite and its subcell, 167
- General features of the PbS-like slabs (substructures), 173
  - The SnS structure type, 173
  - The structure of  $\text{TlSbS}_2$  as the virtual archetype, 177
  - An extreme case of structures related to SnS, 179
- Derivation of the plagionite series of structures from the PbS structure, 180
  - Derivation of cell-twin unit from the PbS structure, 180
  - Derivation of the series of structures, 186
- Tropochemical cell-twinning, 190
- The mode of cation distribution, 191
  - Distribution of cations in fülöppite, 191
  - General features, 196
  - Mode of cation distributions in the W cuts, 196
  - Mode of cation distributions in B cuts, 198
  - Basic rule, 201
  - Cause of the difference between the B cut and W cut, 202
- The nature of Sb - S bonding in the homologues, 204
  - Sulfur atom arrangement about Sb, 204
  - Systematic variation in bond nature of the linked Sb - S groups spanning the slabs, 207
- Conclusions, 210
- Reference, 211

Chapter 8

HIGH-TEMPERATURE HOMOLOGOUS SERIES OF LEAD  
SULFANTIMONITES,  $x\text{PbS}\cdot\text{Sb}_2\text{S}_3$ , WITH  $x = 2$  or  $3$ , 215

Introduction, 215

Smith-Hyde's derivation of the structures, 217

Derivation of the structures from the PbS structure, 218

The scheme of the derivation, 219

Construction of the series of structures, 219

Related structures, 225

Reference, 225

SUMMARY AND COMMENTS, 227

Reference, 231

APPENDICES, 233

1. Contracted twins, 233

2. Characterization of distorted coordination polyhedra, 235

Definition of direct neighbors, 236

The significance of the coordination number and its representation, 241

Weighting scheme for evaluating mean bond length, 242

Examples, 242

General applications, 247

3. A collection of papers concerning new structure data of the crystalline phases cited or related to those in the text, 253

3.1. The crystal structure of yoshimuraite  $(\text{Ba,Sr})_2(\text{S,P})\text{O}_4\text{Mn}_2\text{OH}[\text{Si}_2\text{O}_7\text{TiO}]$ ,  
with discussion on its local symmetry

Y. Takéuchi, Y. Ohashi, H. Sawada and N. Haga, 253

3.2. The crystal structure of yttrium germanate analogue of bustamite,

$\text{Ca}_{4.8}\text{Y}_{0.8}[\text{Ge}_3\text{O}_9]_2$  H. Sawada, Y. Takéuchi and M. Hibi, 265

3.3. Electron-density distributions in kotoite  $\text{Mg}_3[\text{BO}_3]_2$  and sinhalite

$\text{AlMg}[\text{BO}_4]$  with discussions on the structure of sinhalite at elevated  
temperatures

N. Haga and Y. Takéuchi, 271

3.4. The crystal structure of semseyite  $\text{Pb}_9\text{Sb}_8\text{S}_{21}$

Y. Matsushita, Y. Takéuchi and F. Nishi, 288

3.5. A listing of structure factors of yoshimuraite, 294

INDEX, 315
