

CONTENTS

Preface	xiii
On Publishing the English Version of the Book	xv
Chapter I. Fundamentals of Bioactive Compounds	1
1.1 Origin of natural organic compounds	3
1.2 Bioactive compounds	4
1.3 Bioassay	5
1.4 Purification and isolation of bioactive compounds	12
1.4.1 Physicochemical properties of bioactive compounds and their purification methods	12
1.4.2 Examples of purification methods	13
1.5 Significance and history of bioactive compounds research	18
Chapter II. Bioactive Compounds in Terms of Biosynthesis	19
2.1 Major biosynthetic pathways of natural organic compounds	21
2.1.1 Outline of biosynthesis of natural organic compounds	24
2.1.2 Biosynthesis and enzymatic reaction	27
2.2 Fatty acids and their related compounds	27
2.2.1 Long-chain fatty acids and unsaturated fatty acids	29
2.2.2 Prostaglandins and thromboxanes	30
2.2.3 Leucotrienes	30
2.2.4 Sex pheromones of moths	31
2.2.5 Queen's substance	32
2.2.6 Leaf alcohols	32
2.2.7 Jasmonic acid	33
2.3 Polyketides and their related compounds	33
2.3.1 Benzene derivatives with substituent groups	35

2.3.2	Naphthoquinones	35
2.3.3	Anthraquinones	37
2.3.4	Tetracycline antibiotics	37
2.3.5	Various polyketides	38
2.3.6	Biosynthetic enzymes for polyketides and their genes	40
2.4	Terpenoids and their related compounds	42
2.4.1	Monoterpenes	45
2.4.2	Sesquiterpenes	46
2.4.3	Diterpenes	49
2.4.4	Sestaterpenes	52
2.4.5	Triterpenes	52
2.4.6	Tetraterpenes	57
2.5	Compounds via the shikimate pathway	57
2.6	Alkaloids	62
2.6.1	Alkaloids derived from ornithine	63
2.6.2	Alkaloids derived from tyrosine	64
2.6.3	Alkaloids derived from tryptophan	65
2.6.4	Other alkaloids	65
2.7	Proteins and peptides	66
2.7.1	Cleavage of peptide bonds	67
2.7.2	Modification of the N-terminus	69
2.7.3	Modification of the C-terminus	69
2.7.4	Addition of carbohydrate moiety	69
2.7.5	Phosphorylation	71
2.7.6	Sulfonation	71
2.7.7	Disulfide bond formation	71
2.7.8	Other modifications	72
2.7.9	Non-ribosomal peptides	72
Chapter III. Endogenous Bioactive Compounds in Terms of Function		77
3.1	Hormones	79
3.1.1	Plant hormones	80
3.1.2	Vertebrate hormones	89
3.1.3	Invertebrate hormones	101

3.1.4 Microbial hormones	114
3.2 Pheromones	115
3.2.1 Animal pheromones	115
3.2.2 Microbial pheromones	120
3.3 Growth factors	123
3.3.1 Animal growth factors	123
3.3.2 Growth factors of plant cells	125
3.4 Other endogenous bioactive compounds	126
Chapter IV. Exogenous Bioactive Compounds in Terms of Function	129
4.1 Plant growth regulators	131
4.1.1 Allelochemicals	131
4.1.2 Toxins produced by plant pathogenic microbes	132
4.2 Medicinal compounds derived from plants	134
4.2.1 Morphine	134
4.2.2 Compounds acting on tubulin	134
4.2.3 Other medicinal compounds	135
4.3 Vitamins	135
4.3.1 Fat-soluble vitamins	137
4.3.2 Water-soluble vitamins	139
4.4 Insect growth regulators	142
4.4.1 Molting hormone-like compounds and anti-molting hormones from plants	143
4.4.2 Juvenile hormone-like compounds and anti-juvenile hormones from plants	143
4.4.3 Natural insecticides	144
4.4.4 Antifeedants	145
4.4.5 Toxins produced by insect disease microbes	146
4.5 Antibiotics	146
4.5.1 Inhibitors for cell wall synthesis	146
4.5.2 Inhibitors for cell membrane function	149
4.5.3 Inhibitors for DNA and RNA functions	152
4.5.4 Inhibitors for protein synthesis	155
4.6 Modulators for cell function	157
4.6.1 Immunomodulators	157

4.6.2 Modulators for cell cycle.....	159
4.7 Enzyme inhibitors	159
4.8 Toxins of biological origin.....	162
4.8.1 Plant toxins	163
4.8.2 Mushroom toxins.....	166
4.8.3 Animal toxins	166
4.9 Other exogenous bioactive compounds	171
Appendix A: Nobel Prize Winner Related to Bioactive Compounds	175
Appendix B	177
References	179
Index	181

Columns

One more carbon dioxide fixation	4
Investigation of cause for rice “Bakanae” disease	8
Investigation of biosynthesis using isotopes	36
Hiochic acid and mevalonic acid	44
Jokichi Takamine and agricultural chemistry	81
Bitter competition in the research on hypothalamus peptides and the contribution of Japanese researchers	93
Endocrine disruption by non-steroidal artificial compounds	96
Contribution of sericultural industry to insect hormone research	107
“The Insect World of J. Henri Fabre” and investigation of sex pheromones	116
Politics and science related to opium	136
Vitamin B ₁ and Umetaro Suzuki	141
Penicillin research in Japan	150
Research history of tetrodotoxin and its origin	169
Detection method of a prion protein causing bovine spongiform encephalopathy	171
