PREFACE	v
Chapter 1 Introduction	1
1.1 Basics of elastic theory	1
1.1.1 Elastic body in static state	1
1.1.2 Dynamics of elastic body	2
1.2 Basics of tectonics	3
1.2.1 Main structures	3
1.2.2 Faulting mechanics	3
1.3 Basics of seismology	5
1.4 Precursor study and models of earthquake preparation	6
1.4.1 Long-term and middle-term precursors	7
1.4.2 Short-term precursors	8
1.5 Seismo-Electromagnetics and Related Phenomena as a recent stage of study	10
Appendix 1 Definitions of elastic theory	12
Appendix 2 Coulomb-Mohr relationship	14
Appendix 3 Seismic waves and scaling laws	15
References	16
Chapter 2 Short-term effects inside the ground medium associated with earthquakes	19
2.1 Foreshocks. Case study and statistics	19
2.2 Seismo-acoustic emission (SAE)	21
2.2.1 Case study and background	21
2.2.2 Observation of SAE in Matsushiro station	23
2.2.3 Index of seismic activity	26
2.2.4 Observation of SA pulses in Kamchatka (Karymshino)	30
2.2.5 Theoretical discussion and conclusions	32
2.3 ULF electromagnetic emission	34
2.3.1 Prehistory and classification	34
2.3.2 Preseismic ULF effect	38
2.3.3 Near-seismic ULF effect	39
2.3.4 Effect of ULF field depression	41
2.3.5 Coseismic ULF effect	47
2.3.6 Mechanisms of generation and propagation of ULF electromagnetic fields in the conductive ground medium	47
2.4 Hydrological and geochemical phenomena	60
2.4.1 Overview of results	60
2.4.1.1 Water leveling and flow rate in wells and natural springs	
2.4.1.2 Gas/ion content in groundwater and soil	61
2.4.1.3 Correlation with other phenomena	64
2.4.1.4 Conclusions and mechanisms	65
2.4.2 Statistics in Kamchatka area	66
2.4.3 Bubble model	69
Appendix 4 Spectrum of seismic pulse and attenuation coefficient	74
Appendix 5 Telluric fields	76
Appendix 6 Solution for a ULF source pulse: double-potential method	79

Appendix 7 Electromagnetic fields induced by a moving seismic pulse	83
Appendix 8 Electric dipole moment for EK mechanism	85
References	85
Chapter 3 Electromagnetic sounding of seismo-induced atmosphere/ionosphere perturbations	89
3.1 Sounding of upper atmosphere-lower ionosphere boundary by VLF/LF signals	89
3.1.1 Method of VLF sounding and results in Japan	89
3.1.2 Remarks on TT method	93
3.1.3 Recent results in Kamchatka	94
3.1.4 Results in Italy	99
3.2 VHF over-horizon propagation in the lower atmosphere	100
3.3 Remote sensing of the ground surface in association with large earthquakes	103
3.3.1 Review of methods	103
3.3.2 Thermal recordings in and over Kamchatka	105
3.3.3 Main results	108
3.4 Atmospheric ULF/ELF electromagnetic emission	108
3.4.1 Overview of the previous activity	108
3.4.2 Results of observation in Karymshino	113
3.4.3 Possible mechanisms	117
3.5 Theoretical models of seismic influence upon atmosphere	118
3.5.1 Models of electric field influence	118
3.5.2 Modeling of AGW influence	121
Appendix 9 Refraction of radiowaves and Kolmogorov's turbulence in the troposphere	124
Appendix 10 Atmospheric conductivity	126
Appendix 11 Atmospheric gravity waves (AGWs)	128
References	132
Chapter 4 Seismic effects in the ionosphere	135
4.1 Coseismic effects	135
4.2 Search for indirect influence from plasma-wave observation on satellites	135
4.3 Statistics of low-latitude ionospheric turbulence (IT) and its association with seismicity	138
4.3.1 Short history of IT research	138
4.3.2 IT and EA. Cosmos-900, Aureol-3 and IK-24 satellite studies	141
4.3.3 k-distribution statistics and relation between	143
4.3.4 Evidence of seismic impact on IT statistics	147
4.4 Diagnostics of ionospheric perturbations associated with seismicity using VLF transmitter signals received on DEMETER satellite	151
4.4.1 Global monitoring and long time statistics	151
4.4.2 Case study. Comparison with the ground-based VLF signal observation	153
4.5 Seismo-related AGW influence on the ionosphere	155
Appendix 12 Ionospheric conductivity and wind-induced currents	163
References	168
Chapter 5 Conclusions and recommendations for future research	171
5.1 Short-term forecast using SERP precursors	171
5.2 About EQ mechanisms	175
5.2.1 Perturbation of the Earth's heat flux as a main reason of EQ forcing	175
5.2.2 EQ triggering	177
5.3 Possible future directions of SERP research	178
References	180
Appendix 13 Death-toll of large earthquakes (from USGS/NEIC catalog)	182
